

AMENDMENTS TO THE CLAIMS:

1. (Canceled)

2. (Currently Amended) A speaker for reproducing ultrahigh frequencies comprising:

a schematically disk-shaped piezoelectric ceramic vibrator in which a piezoelectric ceramic and a metal substrate are bonded;

a dome-shaped diaphragm attached to said piezoelectric ceramic vibrator;

a voltage boosting circuit connected to said piezoelectric ceramic vibrator and configured to multiply an input drive voltage and apply a boosted drive voltage to said piezoelectric ceramic vibrator; and

a panel which fixes an outer peripheral part of said piezoelectric ceramic vibrator and has an opening part in a front face of said dome-shaped diaphragm; wherein

a diameter of a dome part of said dome-shaped diaphragm is made to be 0.5 to 0.8 times [[the]] an effective movable diameter of said piezoelectric ceramic vibrator; and

the diameter of said piezoelectric ceramic is almost identical to that of said dome part.

3-4. (Canceled)

5. (Currently Amended) A speaker for reproducing ultrahigh frequencies comprising:

a schematically disk-shaped piezoelectric ceramic vibrator in which a piezoelectric ceramic and a metal substrate are bonded;

a dome-shaped diaphragm attached to said piezoelectric ceramic vibrator;

a voltage boosting circuit connected to said piezoelectric ceramic vibrator and configured to multiply an input drive voltage and apply a boosted drive voltage to said piezoelectric ceramic vibrator; and

*Application No. 10/500,182*

a panel which fixes an outer peripheral part of said piezoelectric ceramic vibrator and has an opening part in a front face of said dome-shaped diaphragm; wherein

a diameter of a dome part of said dome-shaped diaphragm is made to be 0.5 to 0.8 times [[the]] an effective movable diameter of said piezoelectric ceramic vibrator; and

a primary resonance frequency at high frequencies of said dome-shaped diaphragm is made to be higher than a secondary resonance frequency at high frequencies of said piezoelectric ceramic vibrator.
